and corporations should take responsibility by changing systems and making environmentally friendly choices easier for individuals.

not enough, but that to make any significant difference, individuals "need to build social movements to attack directly the economic and political structures that with all their influence and guile are blocking comprehensive political measures to reduce carbon emissions. (Shue, 2021, as cited in Hormio, 2023)

Mai Phạm Quỳnh

Governments and corporations are responsible because it is in their power to create reasonable alternatives for individuals. They have it in their power to make it easier and less expensive for individuals to choose the environmentally friendly option and they can provide information that is easily accessible and as straight forward as possible. In essence, they are responsible because they have the power to create opportunities for individuals to do what is right. This could be done by making information accessible, subsidizing organic food while taxing non-organic food, by product development and presentation of products and so forth (Fahlquist, 2009). Governments and corporations are responsible because it is in their power to create reasonable alternatives for individuals. They have it in their

Individual green choices are insufficient, each person must build collective social movements to challenge political and economic systems that prevent effective climate action (Shue, 2021, as cited in Hormio, 2023)

SUMMARY

As they have the power to make sustainable behavior easier for individuals, governments and corporations are responsible for creating affordable and accessible choices, such as providing public information, subsidizing organic food and taxing non-organic products (Fahlquist, 2009).
